

Risk Disclosure Statement

Foreign exchange (Forex) and Contracts for Difference (CFDs) trading involve substantial risk and may not be suitable for all investors. Investing in these markets is highly speculative, and losses can exceed your initial deposit. You should carefully consider your financial situation and trading experience before deciding to trade Forex and CFDs. It's possible to lose all your initial capital, so only invest what you can afford to lose.

Tech4Capital LLC does not provide investment advice, and the information provided should not be considered as such. We are not responsible for any losses arising from any investment based on recommendations, forecasts, or other information provided. Past performance of a financial product does not guarantee future results or returns. While diversification may help spread risk, it does not assure a profit or protect against loss in a declining market.

Leverage can lead to significant losses as well as large gains. The high degree of leverage often obtainable in Forex and CFD trading can work against you as well as for you due to market fluctuations. Investments in foreign exchange and CFD speculation are susceptible to sharp price increases and decreases as market values fluctuate. Seasonal and geopolitical events can significantly impact market prices. The leveraged nature of Forex trading means any market movement will have a proportionally equal effect on your deposited funds.

Before deciding to trade Forex and CFDs, you should carefully consider your investment objectives, level of experience, and risk appetite. Most importantly, do not invest money you cannot afford to lose. Off-exchange financial transactions inherently expose you to risks, including leverage, counterparty risk (risk of broker default), limited regulatory protection, and market volatility that can substantially affect the price or liquidity of a financial asset.

Tech4Capital LLC is committed to helping our clients understand the risks associated with trading and providing tools to manage risk. However, it is your responsibility as the client to understand the risks involved and consider their relevance to your personal financial circumstances before entering into any trades. This brief statement does not disclose all of the risks and other significant aspects of trading in Forex and CFDs. You should therefore carefully study Forex trading and CFDs before you trade.
